DETAILED ACTION

Response to Argument

The examiner acknowledges the amendment filed 5/20/05 has been carefully considered and upon further search the examiner is hereby make a new ground of rejection.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 - 4, 11 – 14 are rejected under 35 U.S.C. 102(b) as being anticipated Ukei et al (US 6, 239,603).

As to claims 1, 11, 14, Ukei et al discloses (fig 1) a method and system of monitoring an integrated circuit chip, comprising:

(a) receiving at least one digitized sense signal (from the sense circuit 1 -5) from the integrated circuit chip (10), whereby the at least one digitized sense signal represents a corresponding process-dependent parameter (test signal, voltage or current) within the integrated circuit chip (10) ; and

(b) determining an analog value (the parameters could be digital or analog form) for the at least one process dependent circuit parameters (test signal, voltage or current) from the corresponding at least one digitized signal (1 -5); wherein the process-

dependent parameter (test signal, voltage or current) is measured within a process monitor portion of the integrated circuit (10) and the at least one determined analog value is utilized (test signal, voltage or current) to correct for the process-dependent parameter in an operational portion of the integrated circuit (10).

As to claims 3, 13 Ukei et al discloses (fig 1) the method according to claim 1, wherein step (b) comprises retrieving the at least one value (expected value) from a look-up table using the at least one digitized signal.

As to claims 4, 14, Ukei et al discloses (fig 1) the method according to claim 1, wherein step (b) comprises calculating (from the monitor TEG) the at least one value from the at least one digitized signal.

As to claims 2, 12, Ukei et al discloses (fig 1) a method wherein steps (a) and (b) are perform outside of the ic (10).

Allowable Subject Matter

1. Claims 5 – 10, 15 – 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art of record are fail to disclose digitized sense signal includes a plurality of digitized sense signals that represent a plurality of the following:

a gate-to-source threshold voltage of a transistor fabricated on the integrated circuit chip;

a transconductance parameter of a transistor fabricated on integrated circuit chip;

a sheet resistance of a resistor fabricated on the integrated circuit chip;

a temperature of the integrated circuit chip; and

a power supply voltage on the integrated circuit chip.
